Maximum Advantage Roulette System

Input variables:

1. Select a **layout section** to use (Red/Black, Low/High, Odd/Even).
2. Select the **Betting Series** to use (Plan A or Plan B)
3. Choose a **Level** to place your bet for the previous selected Betting Series.
   a. For Series A: choose either
      1. Level 1 = 5 units
      2. Level 2 = 10 units
      3. Level 3 = 15 units
      4. Level 4 = 20 units

   b. For Series B1: choose either
      1. Level 1 = 10 units
      2. Level 2 = 20 units
      3. Level 3 = 30 units
      4. Level 4 = 40 units
   .
4. Choose your **Win Goal** (session will END when this is reached)
5. Choose your **Loss Goal** (session will END when this is reached)
6. Enter your **Starting Bankroll** based on what Level you choose.
   a. Level 1 = 500 units recommended
   b. Level 2 = 1000 units recommended
   c. Level 3 = 1500 units recommended
   d. Level 4 = 2000 units recommended

 (Note: information below is an excerpt from "Maximum Advantage Roulette" documentation published by Silverthorne Publications)

Below is a review of the Key aspects of this system strategy.

1. You will only make one bet on one of the even-money (Outside) bets in roulette. All of my examples are for the colors of Red or Black, but you can just as easily use Odd or Even, or wager on High and Low. The key is to stay with the same type of Outside bet in a given game (i.e., don't switch from colors to odd and even)

2. Your wagers will be based on a Betting Strategy where you will increase the size of your wagers following losses and reduce the size of your bets after wins.

3. You will place your bets using a Bet Selection method that has a set of rules that will automatically determine whether you wager on Red or Black

Rules for the Controlled Risk Betting Strategy

The Controlled Risk Betting Strategy is used to determine the size of each bet you will make. A different Betting Series is associated with each bankroll level. The amount of money used for a game determines the size of your betting series. At this point, I have assumed that you will be playing at a table with $5 minimum bets. The CRB Strategy will work for many different levels of betting, from $1 wagers to $40 bets. The principles remain the same, regardless of the size of the wagers. Here are the rules governing wagering using $5 minimum bets:

> 1. Your base bet is $5. Your will never wager an amount smaller than the amount of your base bet in any game.

> 2. The maximum bet for using the $5 minimum bet series is $27. If this amount is lost, your next wager will drop to $15. This rule is designed to limit the size of losses.

> 3. Following any loss, the next wager is increased by $3.

> 4. Following any win, the next wager is reduced by $2.

> 5. Following two consecutive wins, the next wager is reduced by $5, subject to making a minimum wager of $5. We are going to add an additional betting series to our first one which used $5 as its base bet.

> We will call the first betting series, using a $5 base bet, "Series A" and the following betting series, which uses a Base Bet of $10, "Series B."

> The rules for betting Series B are as follows:

> 1. Your base bet is $10. You will never wager an amount smaller than the amount of your base bet in any game.

> 2. The maximum bet for using the $10 minimum bet series is $54. If this amount is lost, your next wager will drop to $30. This rule is designed to limit the size of losses.

> 3. Following any loss, the next wager is increased by $6

> 4. Following any win, the next wager is reduced by $4.
> 5. Following two consecutive wins, the next wager is reduced by $5 subject to making a minimum wager of $10.

For any session of roulette, you will need to be prepared to wager either Betting Series A, with a $5 Base Bet, or Betting Series B, using a $10 Base Bet.

Rules for the Adaptive Pattern Betting Method

The Adaptive Pattern Betting Method determines where to place your wagers. There are two methods of selecting where to place your bets.

     1. **"Pattern."** Observe one decision. Bet the same as this outcome until losing two consecutive bets.

     2. **"Switch-Opposite."** After losing two consecutive wagers using the Same Pattern, switch to the Opposite Pattern. Here, you will wager the opposite of the second preceding decision until losing a wager. After losing a wager, resume betting the Same Pattern.

     3. **New Rule:** If we lose a Pattern bet immediately after changing from betting Switch-opposite (will call this method "Switch" for simplicity), you will immediately change back to betting Switch. This is to prevent you from being whipsawed in games with erratic patterns.
     The Same Pattern method is our workhorse method. It works well about 75% to 80% of the time. For the times when it isn't working well, we resort to using the Switch Method.

Different Betting Series

I have used only two betting series, Series A and Series B in all of our examples so far. The base bets for these series are $5 and $10, respectively. I don't want you to think that these are the only levels of play possible using the Maximum Advantage Roulette Strategy. You can gear the level of your play to the size of your bankroll. In fact, one method of play that you may consider is to gradually increase the size of your buy-ins as your bankroll grows.
Increasing the size of your bankroll using casino winnings is an excellent way to leverage your winnings.
